2 Policy Objectives and Scope

2.1 Purpose

2.2 Scope

2.3 Approved Remote Access Methods

2.4 Endpoint Security Requirements

2.5 Mobile/BYOD Controls

2.6 Monitoring & Session Management

3 Policy Compliance

3.1 Compliance Measurement

3.2 Exceptions

3.3 Non-Compliance

3.4 Continual Improvement

2. Policy Objectives and Scope

2.1 Purpose – Secure connectivity for off-site work while protecting company data on personal and remote devices.

2.2 Scope – All remote network connections and any personally owned devices used for company activities.

2.3 Approved Remote Access Methods

- Use VPN or zero-trust proxy with MFA for administrative or data-sensitive access.
- SSH only with key-based auth; prohibit direct RDP/SSH from the public internet.
- Disable remote access on systems where not required.

2.4 Endpoint Security Requirements

- Devices must run supported OS, be fully patched, and have disk encryption enabled.
- Install company-approved endpoint protection and auto-lock after 15 minutes idle.

2.5 Mobile/BYOD Controls

- Register BYOD devices; enforce PIN/biometric, encryption, and remote-wipe capability.
- Company email and data stored in managed app or container where feasible.
- Remove company data and access immediately upon contract end or device loss.

2.6 Monitoring & Session Management

- Log VPN and privileged remote sessions; retain logs for at least 90 days.
- Auto-disconnect inactive VPN sessions after 12 hours or shorter if supported.
- Review remote-access logs monthly for anomalies.

3. Policy Compliance

3.1 Compliance Measurement – Quarterly sample confirms 100 % of remote devices meet patch/encryption policy; VPN logs reviewed.

3.2 Exceptions – Temporary allowance for unsupported device requires management approval and remediation timeline.

3.3 Non-Compliance – Non-compliant device blocked from network until remediated; repeat violations escalated to HR/management.

3.4 Continual Improvement – Evaluate new secure-access technologies and refine BYOD requirements annually.
